

# Technical Evaluation Report: Harness Implementation for UI Automation

## (CSB Bank/united bank/bankrupt)

### Document Information

Field	Details
Document Title	Technical Evaluation Report on Harness Implementation for Testing
Department	Devops
Document Owner	Rahulganesht TS
Primary Author	Rahulganesht TS
Organization	Infinite computer solution
Location	Pune
Status	Analysis
Start/End Date	5-12-2025   19-12-2025
Confidentiality	<i>Internal / Confidential</i>

### Version History

Version	Date	Author	Description of Change
0.1.0	19-12-2025	Rahulganeshts	Initial draft
0.2.0	-	-	Review comments incorporated
0.3.0	-	-	Approved release

## **Events In Sequence Of Execution:**

Content 1:Program for csb bank,which passed in java editor,done in VDI environment:

Content 2 : screenshot of the result

Content 3: Result Report

Content 4 : Xpath Entries used in this program and over all builds, only for username, password and submit button

Content 5: Real unedited worksheet for iteration 1,2,3 ....16

Content 6: Result of harness with all the screenshot details of all build and pipeline iterations

Content 7: Errors on all xpath type against harness errors

Content 8: Expected behaviour in any domain,if no restrictions

Content 9:same program ,modified into 3 times more for harness compatibility without change of logical Locators

Content 10: previous url failure on any xpath type

Conclusion :

# Technical Evaluation Report: Harness Implementation for UI Automation

## (CSB Bank/united bank/bankrupt)

        fw.write(sb.toString());  
    } catch (IOException e) {  
        System.err.println("Failed to write HTML report: " +  
e.getMessage());  
    }  
}  
  
private static String relPathForReport(File reportFile, String  
screenshotAbs) {  
    try {  
        Path reportDir =  
reportFile.getParentFile().toPath().toAbsolutePath();  
        Path screenshot = Path.of(screenshotAbs).toAbsolutePath();  
        return reportDir.relativize(screenshot).toString().replace("\\\\",  
"/");  
    } catch (Exception e) {  
        return screenshotAbs;  
    }  
}  
  
private static String safe(String s) {  
    return (s == null) ? "" : s;  
}  
  
// Escape only dynamic content (do NOT escape structural HTML  
tags)
```

```

private static String escapeHtml(String s) {
    if (s == null) return "";
    return s.replace("&", "&")
        .replace("<", "<")
        .replace(">", ">");
}

```

## Content 2 : screenshot of the result

```

public class csbbank {
    public static void main(String[] args) {
        // Read from System.in
        // Process input
        // Write to System.out

        // Optional: add a pragmatic URL check, if there is a stable pattern (adjust if you know
        // if (!currentUrl.contains("onlinebank.com")) {
        //     status = "FAIL";
        //     message = "Expected to be on CSB OnlineBank domain. Current URL: " + currentUrl;
        // }

        } catch (Exception e) {
            status = "FAIL";
            message = "Exception: " + e.getClass().getSimpleName() + " - " + safe(e.getMessage());
        }

        // Screenshot on failure
        // ...
    }
}

```

## Content 3: Result Report

## Content 4 : Xpath Entries used in this program and over all builds, only for username, password and submit button

Note : I had already proved that with By.id ,By.name,By.css selector failed with harness though it got passed running java program in IntelliJ.

For url: [Sign In - COMMUNITY STATE BANK](#)

User name :

Relative xpath for css selector :

#M\_layout\_content\_PCDZ\_MMCA7G7\_ctl00\_webInputForm\_txtLogInName

Relative xpath for Id :

```
//input[@id='M_layout_content_PCDZ_MMCA7G7_ctl00_webInputForm_txtLoginName']
```

Index xpath for id :

```
(//input[@id='M_layout_content_PCDZ_MMCA7G7_ctl00_webInputForm_txtLoginName'])[1]
```

Relative xpath for name :

M\$layout\$content\$PCDZ\$MMCA7G7\$ctl00\$webInputForm\$txtLoginName

Class name : form-control component-group

**Password:**

Relative xpath for css selector :

```
#M_layout_content_PCDZ_MMCA7G7_ctl00_webInputForm_txtPassword
```

Relative xpath for id:

```
//input[@id='M_layout_content_PCDZ_MMCA7G7_ctl00_webInputForm_txtPassword']
```

Relative xpath for

name://M\$layout\$content\$PCDZ\$MMCA7G7\$ctl00\$webInputForm\$txtPassword

Class name : signin-password

**Submit button:**

Relative xpath for css selector :

```
#M_layout_content_PCDZ_MMCA7G7_ctl00_webInputForm_cmdContinue
```

Relative xpath for id:

```
//input[@id='M_layout_content_PCDZ_MMCA7G7_ctl00_webInputForm_cmdContinue']
```

Relative xpath for  
name://M\$layout\$content\$PCDZ\$MMCA7G7\$ctl00\$webInputForm\$c  
mdContinue

Class name : btn btn-primary

Index xpath for id

://input[@id='M\_layout\_content\_PCDZ\_MMCA7G7\_ctl00\_webInput  
Form\_cmdContinue'][1]

Now this is the proof for left out xpath scenario ,class and contains to prove that class and contains (in generic way) also will fail in harness.

FYI : Starts with and ends with will be out of scope.

### Xpath entries :

// Username

```
wait.until(ExpectedConditions.visibilityOfElementLocated(  
    By.xpath("//input[contains(@class,'form-control') and  
contains(@class,'component-group')]")  
)).sendKeys("Retailuser1");
```

// Password

```
wait.until(ExpectedConditions.visibilityOfElementLocated(  
    By.cssSelector("input.signin-password")  
)).sendKeys("Google@44566");
```

// Sign In button

```
wait.until(ExpectedConditions.elementToBeClickable(  
    By.xpath("//*[contains(@class,'btn') and contains(@class,'btn-  
primary')]")  
)).click();
```

// Wait for the correct page title (use title, not URL)

```
wait.until(ExpectedConditions.titleContains("Account Summary -  
COMMUNITY STATE BANK"));
```

---

**Content 6: Result of harness with all the screenshot details of all build and pipeline iterations**

With harness changes after 16 iteration on this just one login case, Thus proved ,it failed for left out generic xpath variations like contains and class

Please find the error screenshot of 16<sup>th</sup> build failed on point for the generic locators.

The screenshot shows the Harness UI interface. The top navigation bar includes links for Workspace 2, FUEL, Clarity, Share, Login, Sign In, Admin, Your, Logo, SailPoint, Daily, Sign In, No fail, and various system icons. The main title bar displays the URL: https://app.harness.io/ng/account/dF4DlmcuRrm5TX98gtufuQ/module/ci/orgs/default/projects/Demo\_gitrepo/pipelines/Banklogin/execut... .

The pipeline details panel on the left shows a single pipeline named "auderu10build" which has started at 12/19/2025, 6:17:39 AM and completed in 20 seconds. It lists four steps: Initialize (1m 2s), Clone codebase (16s), Setup Build Intelligence (42s), and Run\_1 (42s). The "Run\_1" step is highlighted in blue, indicating it is the current step being viewed.

The central "Logs" tab is selected, showing the "Console Logs" section. The log output is as follows:

```

## Content 10: previous url failure on any xpath type

“This is the third bank URL I am working on. Previously, everything failed when trying to locate the ‘Continue’ button in Java using contains and class please find the screen shot ,related to last Fridays mail failure case.”

Test Case	Username	Password	Status	Result URL	Timestamp
Case 1: Wrong Username	wronguser	Test@2025	FAIL - Unexpected behavior	<a href="https://bankubt.onlinebank.com/SignIn.aspx?p_r=1">https://bankubt.onlinebank.com/SignIn.aspx?p_r=1</a>	2025-12-17 10:40:57
Case 2: Wrong Password	Pawaradmin01	wrongpass	FAIL - Unexpected behavior	<a href="https://bankubt.onlinebank.com/SignIn.aspx?p_r=1">https://bankubt.onlinebank.com/SignIn.aspx?p_r=1</a>	2025-12-17 10:41:34
Case 3: Blank Credentials	[blank]	[blank]	FAIL - Unexpected behavior	<a href="https://bankubt.onlinebank.com/SignIn.aspx?p_r=1">https://bankubt.onlinebank.com/SignIn.aspx?p_r=1</a>	2025-12-17 10:42:05
Case 4: Correct Credentials	Pawaradmin01	Test@2025	FAIL - Still on login page (login failed)	<a href="https://bankubt.onlinebank.com/SignIn.aspx?p_r=1">https://bankubt.onlinebank.com/SignIn.aspx?p_r=1</a>	2025-12-17 10:42:40

## Conclusion :

Conclusion: Why Using Harness for UI Test Automation May Not Be Practical

Continuing from the report that failed last Friday 12.12.25, extending to that:

After making numerous changes just for a simple login case, you can imagine the effort required for more complex functionalities. I doubt this approach will serve the intended purpose. **Why are we doing this?** It feels like a waste of time because we end up reconstructing the entire program just to make it run in Harness—even though it already works successfully in IntelliJ/Eclipse.

---

## Let's Understand the Purpose of Harness

Harness is primarily designed for continuous integration and deployment of complex applications, enabling multiple engineers to collaborate efficiently across environments. However, I don't see how this translates effectively for UI testing. If a basic login test is causing significant challenges, what will happen when we move to more complex modules deeper in the application? For context, we've had 155 builds so far without a successful login test—except for one case where the HRMS login page worked, which shows that in a general scenario it can succeed. This ratio should be carefully evaluated before proceeding further.

---

## Key Questions

- Are we trying to find issues after completing all functional testing and passing automation tests with reports? If so, **what's the real benefit?**
- We have already identified and validated web locators during automation testing, considering the significant effort of the automation team. **Why should we spend triple the time redoing locators or restructuring code just to fit Harness?**

---

## Major Concerns

- There is **no scope for CD (deployment)** here. If we are not deploying to any environment, then using Harness seems unnecessary—almost like doing it for self-satisfaction.
  - If someone is desperate to implement CI for test pipelines, there are other standard tools like **Azure DevOps, Jenkins, and GitHub Actions**. These are widely used and well-suited for both application code and test code.
  - Moreover, since our application is in the banking domain, there may be restrictions on dynamic DOM elements, which will affect these tools as well. So the challenge **is not the CI tool—it's the nature of the application**.
- 

## Effort Summary

Over the past 15 consecutive days—including nights and weekends, I have worked on 155 builds. Today marks the 15th day in a row. This effort is not formally accounted for, yet the amount of work invested to identify and prove the root cause of the failure has been significant. Please note that it is still the default organization setup, and no access has been provided yet for any repositories.

---

## Closing Statement

I request that this report be reviewed thoroughly before any decisions are made. The intent is not to assign blame but to highlight the challenges faced and the effort invested so that we can take informed steps moving forward. A collaborative discussion on alternative

approaches or additional support would help ensure success for future tasks.
